

FOUNTAINS AND MULTIMEDIA WATER SYSTEMS

Szczepański Square, Kraków

Galeria Północna, Warsaw

We offer modern and innovative water systems, which create a unique atmosphere and provide unforgettable experiences and are also important and distinguishing features of public spaces, often becoming a symbol of them.

Multimedia fountain on Litewski Square, Lublin

Our portfolio includes the most prestigious and recognizable fountains and multimedia systems in Poland

Our projects bring splendor to markets, squares, parks and other representative locations in many towns and cities, and provide shopping centers and malls with an inimitable character.

Posnania Shopping Mall, Poznań

Four Quarters Fountain, Gdańsk

Musical fountain, Pomeranian Philharmonic, Bydgoszcz

Multimedia Fountain Park in Warsaw

One of the Watersystem's most spectacular projects.

This complex of four fountains, with a total water surface area of 2850m², is the most modern in Poland and consists of, among other things: 367 water nozzles, including 227 digitally controlled ones, 295 LED RGB reflectors making it possible to obtain 16 million colors, 22 pumps with a total power of 285.5 kW, as well as a laser, projector and sprayed water screen.

The Multimedia Fountain Park is one of the largest tourist attractions in Warsaw, and over a million viewers watch its breathtaking displays every year.

Multimedia fountain on Litewski Square in Lublin

Completed by Watersystem in 2017, this modern water facility, consisting of nine fountains - the main multimedia fountain equipped with 227 nozzles, a spiral fountain, and seven springs situated in the new part of the promenade.

Both interactive fountains and the multimedia spectacles presented here, utilizing the entire spectrum of capabilities available for such a complex, i.e. water, light, sound and lasers, are today one of Lublin's calling cards, while Litewski Square has been named one of the most beautiful city squares in Poland.

Watersystem's fountains are an exceptional combination of beauty, aesthetics, design and the highest-quality materials and workmanship.

The modern technologies employed to build fountains and multimedia systems combined with materials of the highest quality and workmanship of the highest precision guarantee the most spectacular water effects in terms of both height and the dynamics of the water image. Multi-colored lighting, sound and imaging complement these extraordinary water compositions.

Europejski Square near Warsaw Spire in Warsaw

On this square in Warsaw, combining business and public functions, unique and innovative water systems melded into carefully selected greenery and elegant small architecture were a must-have feature.

We will design and execute the most complicated water systems

Fountain at the Promenada Shopping Mall in Warsaw

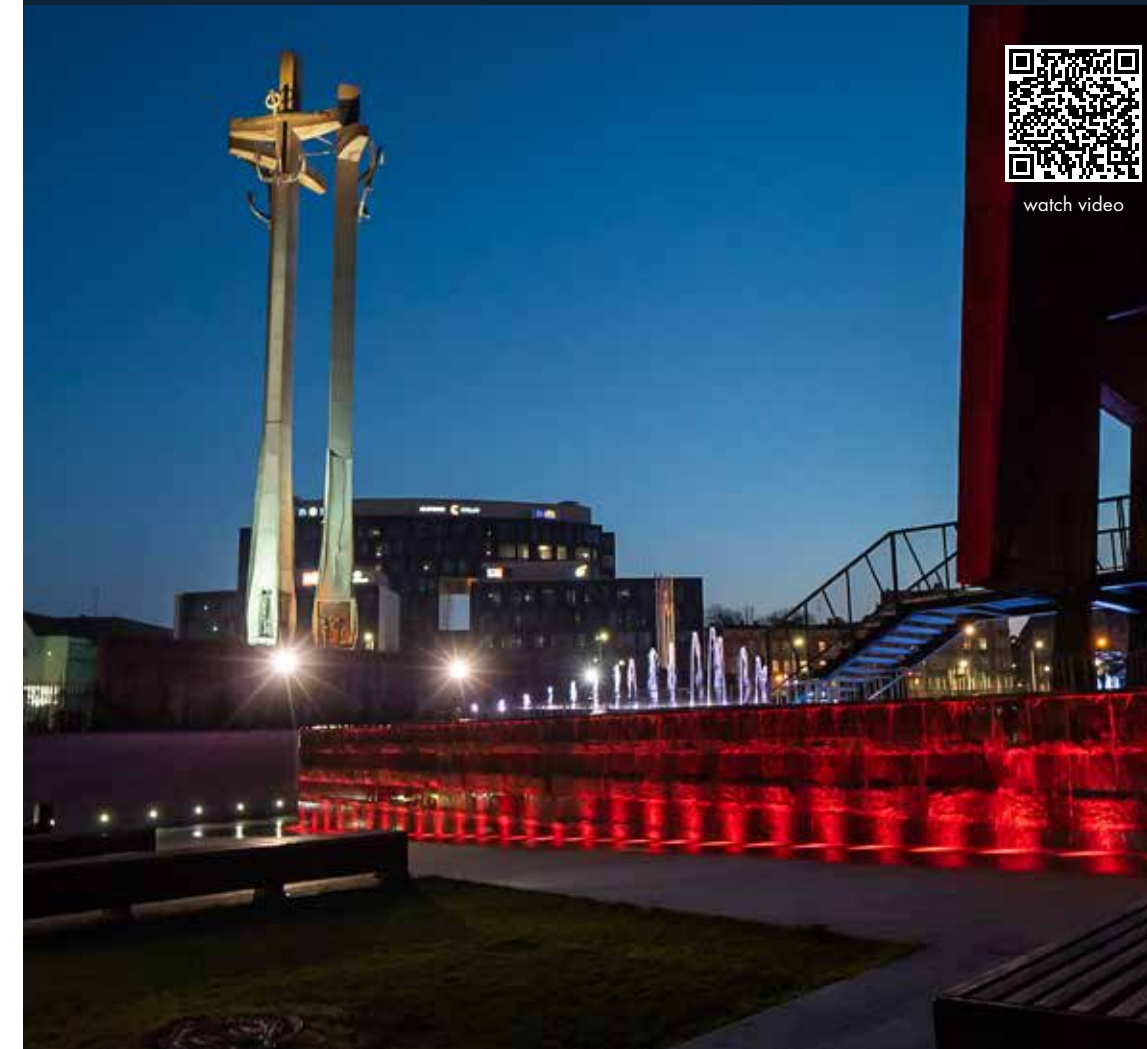

Original and utilizing the latest engineering achievements in the field of water systems construction, the fountain at PROMENADA Shopping Mall captures customers' attention and is a perfect spot for social gatherings and rest after some good shopping.

Watersystem fountains are made with the greatest care for detail and quality of finishing, so they can serve as decorations in luxury interiors and grand spaces.

We make our boldest ideas and artistic visions a reality

We cooperate strictly with our Clients and design teams, constantly shifting the boundaries of what can be imagined and executed. We are involved in every stage of a fountain's creation, from concept, through design, selection of technologies and the right subassemblies, all the way up to construction and start-up. During these works, we always take into account both the expectations of our Clients and the nature of the location where our system will be created.

European Solidarity Center (Europejskie Centrum Solidarnosci) in Gdańsk

The fountain in front of the ECS in Gdańsk is a unique water system equipped with: two modern pumps, which direct water to 40 nozzles, 23 underwater jets firing off water streams with varying frequency on the wall at the center of the fountain, and 150 underwater reflectors, flashing a myriad of colors, nearly 16 million. The fountain makes it possible to create astounding and unforgettable displays.

We will advise with regard to selection and then conduct the entire process of creating the fountain, regardless of whether it will be a modern multimedia system, a “light-water-sound” water facility, a boulevard fountain built on the sidewalk, or a traditional basin fountain.

Scale and size of an investment are not a problem for us. We undertake the realization of large and technologically advanced multimedia systems and smaller water objects, as well as modernization of classical fountains, with equal enthusiasm.

Neptune's fountain
in Gdańsk

Renovations and modernizations of classical fountains, which are often monuments, have an important place among our projects.

WHY WATERSYSTEM FOUNTAINS?

Highest quality

- Components and materials for fountain construction originate solely from renowned suppliers, global leaders in the industry. Thanks to this, they are reliable, perfectly adjusted and guarantee a long operating lifetime.
- All of the solutions offered by Watersystem have CE and PZH (Polish Institute for Public Health) certificates and are compliant with European standards. Furthermore, they are environment-friendly – saving energy and water.

Experience

- We have been present on the market for over 20 years.
- We have completed nearly 600 projects, including over 200 fountains and multimedia systems.
- We are unquestionably a leader on the Polish market.

nearly **600 designs**
over **200 fountains**

Professionalism

- The water systems and fountains designed and made by Watersystem are always adapted to the Client's specific needs and expectations.
- We offer support and consulting in planning of the most complicated and demanding water systems.
- Our knowledge and experience make it possible to create the best solutions, from a technical, technological and aesthetic perspective alike.

Fontanna Heweliusza, Gdańsk

Specialized engineering and technical staff

Watersystem's engineering staff has skills, know-how and experience that are unique on the Polish market, enabling them to offer the best possible solutions for designing and construction of fountains and multimedia systems.

Complete technical documentation for completed water systems

Every system made by us, regardless of its size, specifications and materials used in its construction, includes professional technical documentation.

360° service: from consulting and design to complete solution

- Our offer is comprehensive and can cover all stages of preparation of a water system, i.e. consulting, development of technological concepts, design, construction and assembly, as well as start-up.
- Guarantee and post-guarantee repair and maintenance service.
- Training on operation and maintenance of systems.

BENEFITS FOR THE CLIENT

from cooperation with Watersystem

Convenience

- Comprehensive service - from concept and design to execution.
- Long lifetime of offered systems and applied technical and technological solutions.
- Modern and intuitive fountain control.
- Professional maintenance and repair service.

Safety

- Watersystem fountains and multimedia water systems are reliable.
- All parts used to build water systems are available and can potentially be replaced, regardless of whether the given component is in production or not.
